TIM Solutions - Process Automation as a success driver

In order to implement digital process automation, more than 500 companies in 74 countries worldwide are already relying on the TIM BPM Suite; the future-oriented and intuitively operable digital process automation solution. Based on these implementation projects, we have personally and competently worked alongside our customers over many years. We understand project work as a partnership.

Modeling, automating, optimizing: The TIM BPM Suite combines technical process modeling, intelligent workflow automation and in-depth process analysis in a unique, overall solution. From an intuitive form design to the seamless integration of any number of interfaces to essential insights into the performance of your processes, our BPM software solution supports you as best as possible in every phase of the workflow lifecycle.

TIM BPM Suite - Digital Process Automation made easy
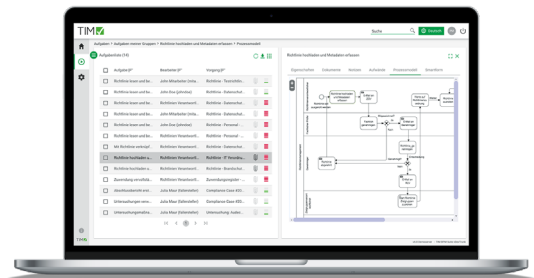

Design - Process Management

TIM gives you the unique freedom to use any BPMN 2.0 modeling tool to map your workflows. With our no-code form designer, you can easily configure even complex forms yourself.

Automate – Realise your potential

Start your processes as real workflows with just a few clicks. With our intuitive user interface, you always keep an eye on your processes while TIM takes care of the administrative work in the background.

Improve - Reporting & Monitoring

The TIM BPM Suite gives you valuable insights into the performance of your processes. Analyze real-time data in order to make better decisions, minimize risks and continuously optimize your processes.

Your advantages:

- Control of processes in real time
- Reduce costs and lead times
- Comply with regulatory requirements

- Minimisation of process errors
- Transparency of all processes in your company

- Version and revision security
- Use a modeling tool of your choice (BPMN 2.0)
