# Why TIM?
TIM BPM Suite compared to JobRouter

TIM

TIM Solutions was founded in 2007 with the vision of making business processes the driving force behind your company's success. Our software stands for state-of-the-art technology and groundbreaking innovation in the field of digital process automation. Our experience from over 400 implemented projects shows that every process is as individual as the company using it. We understand the critical role of citizen developers, which is why we have created software that empowers your teams and departments to drive digital transformation across your organisation.

Key Benefits and Highlights

#1 No-code philosophy
Thanks to TIM´s no-code approach, employees can actively participate in the process using the intuitive web-based interface - no IT know-how required!

#2 BPMN 2.0 industry standard
TIM is the only automation solution worldwide that gives you unlimited freedom to use any BPMN 2.0 standard modelling tool to map your workflow.

#3 Your digital ROI
With TIM, you can count on a fast development phase and an umcomplicated roll-out, saving you time and money and helping you see a return on your investment (ROI) in less than 6 months.

#4 Customizable templates
Simply customize our process templates and get started! Our turnkey customized solutions combine our collective hands-on experience with the expertise of industry experts and universities.

#5 Achieve your goal faster
As a true lightweight, TIM enables smart information logistics and quick adjustments. Benefit from a true continual improvement process (CIP) thanks to automated processes!

#6 Convenient connectors
Our connectors allow you to seamlessly integrate external data sources from existing IT systems into your workflows, making it even easier to connect any number of corporate applications.

#7 Intuitive user interface
The web-based interface ensures everyone involved in the process hast easy access to tasks and processes, while process owners have a continuous overview of the current status.

#8 Excellent customer service
Our customers can attest to our outstanding support in every phase of a project. With an experienced team of experts, we actively support you during the implementation of your project.

Why TIM?
TIM BPM Suite compared to JobRouter

JobRouter - An Overview

Every process automation software has its pros and cons - we want you to know which tool best suits your organisation's needs. In the following overview you will find some facts about JobRouter's process automation tool and how it differs from the TIM BPM Suite, so that you can decide for yourself which tool best fits your company´s requirements.

Key Facts

Product:	JobRouter Platform
Foundation:	2003
# of Employees:	approx. 70
Headquarter:	Germany
Philosophy:	Low Code

Pricing

To date, we do not have specific pricing information as it is not public.
However, JobRouter offers a basic platform with a number of features, all of which are priced separately as modules.
This can add up quickly if you want to cover more than the basics.

Main Weaknesses

Pricing: The modular pricing structure, while offering flexibility, poses a potential disadvantage as expenses can quickly accumulate when purchasing multiple modules separately, increasing the overall cost of ownership and potentially making it cost-prohibitive for smaller organizations or those on tight budgets.

Document-/data workflows: Originating from its roots in document management, JobRouter places a strong emphasis on data-centric and document-driven workflows.

No BPMN support: The lack of native support for BPMN is a drawback, as users have to learn their proprietary modelling notation from scratch. In addition, existing BPMN process models must be converted, and there is usually no way back.

Lack of process management approach: JobRouter does not support typical process management capabilites, like process landscapes, process portal and process documentation. They are only focussing on automation.

Difficult learning experience: Requires programming experience to cover all aspects and use cases.

Summary

JobRouter, while offering automation solutions, presents several notable drawbacks that may hinder its appeal to certain users. Firstly, its modular pricing structure, although providing flexibility, can lead to substantial expenses as users add multiple modules separately, potentially rendering it cost-prohibitive for smaller organizations or those with limited budgets. Originating from its foundation in document management, JobRouter prioritizes data-centric and document-driven workflows, which may not fully align with the needs of organizations with diverse or less document-intensive processes. Moreover, the lack of native support for BPMN poses a significant disadvantage, requiring users to learn a proprietary modeling notation and navigate the complexities of converting existing BPMN process models. Additionally, JobRouter's focus on automation overlooks typical process management capabilities such as process landscapes and documentation, limiting its utility for comprehensive process management needs. Lastly, mastering JobRouter may prove challenging for users without programming experience, potentially slowing down implementation and customisation processes.
