

Why TIM?

TIM BPM Suite compared to Power Automate

TIM Solutions was founded in 2007 with the vision of making business processes the driving force behind your company's success. Our software stands for state-of-the-art technology and groundbreaking innovation in the field of digital process automation. Our experience from over 400 implemented projects shows that every process is as individual as the company using it. We understand the critical role of citizen developers, which is why we have created software that empowers your teams and departments to drive digital transformation across your organisation.

Operational Cockpit with Task Overview and Live Process Status

Key Benefits and Highlights

#1 No-code philosophy

Thanks to TIM's no-code approach, employees can actively participate in the process using the intuitive web-based interface - no IT know-how required!

#2 BPMN 2.0 industry standard

TIM is the only automation solution worldwide that gives you unlimited freedom to use any BPMN 2.0 standard modelling tool to map your workflow.

#3 Your digital ROI

With TIM, you can count on a fast development phase and an uncomplicated roll-out, saving you time and money and helping you see a return on your investment (ROI) in less than 6 months.

#4 Customizable templates

Simply customize our process templates and get started! Our turnkey customized solutions combine our collective hands-on experience with the expertise of industry experts and universities.

#5 Achieve your goal faster

As a true lightweight, TIM enables smart information logistics and quick adjustments. Benefit from a true continual improvement process (CIP) thanks to automated processes!

#6 Convenient connectors

Our connectors allow you to seamlessly integrate external data sources from existing IT systems into your workflows, making it even easier to connect any number of corporate applications.

#7 Intuitive user interface

The web-based interface ensures everyone involved in the process has easy access to tasks and processes, while process owners have a continuous overview of the current status.

#8 Excellent customer service

Our customers can attest to our outstanding support in every phase of a project. With an experienced team of experts, we actively support you during the implementation of your project.

Why TIM?

TIM BPM Suite compared to Power Automate

Power Automate - An Overview

Every process automation software has its pros and cons - we want you to know which tool best suits your organisation's needs. In the following overview you will find some facts about Microsoft's Power Automate process automation tool and how it differs from the TIM BPM Suite, so that you can decide for yourself which tool best fits your company's requirements.

Key Facts

Product:	Microsoft Power Automate
Foundation:	1975
# of Employees:	approx. 220,000
Headquarter:	USA
Philosophy:	Low Code

Pricing

Cloud flows are available for 14€ per user/month with many restrictions in the small print.

Some features, such as premium connectors, are not included in the Microsoft 365 license and may add up to an expensive deployment.

Main Weaknesses

Pricing:

While Power Automate has a free version, the premium version can be quite expensive for organisations with many users, complex workflows or integrations.

Developer skills required for real-world projects:

Power Automate seems simple at first, but it quickly becomes code-heavy when it comes to real use cases.

No BPMN support:

The lack of native support for BPMN is a drawback, as users must learn their proprietary modeling notation from scratch. In addition, existing BPMN process models serve only as a template for IT developers and must be completely redesigned.

Huge limitations in the small print:

Such as limited process instance duration. After 30 days, any pending steps of a flow time out.

Limited support and lack of professional services:

Microsoft only has support representatives and no inhouse professional services team. Based on reviews, there is a lack of support for complex decision-making and conditional logic.

Summary

Recent history shows that organisations assume Microsoft Power Automate is free because they already have an enterprise-wide Microsoft 365 license. This may be true for smaller use cases, but when it comes to real-world projects, the limitations quickly become apparent and add-on pricing quickly adds up. In addition, Microsoft Power Automate is not designed for business departments/citizen developers, but implementations tend to end up being coded.

In the words of analyst Forrester: „The majority of Microsoft deployments are wide, with a smaller number of deep or automation fabric use cases. [...] One reference customer quipped, “When you get outside of what is easy to do, you move into the realm of impossible.” References tell us the tools are spread across the portfolio and often don't work well together, which overlapping features complicate. Component integration has improved but often requires higher licensing.“
