Overview of different approaches and tools

We empower
everyone to
easily automate
any process.

Our company vision guides us in everything we do. As a result, our TIM BPM Suite enables companies small and large to automate all of their business processes. Our software solution is distinguished by its ability to allow even the most complex processes to be easily created, its high implementation speed and the option to use any BPMN 2.0 modelling tool.

01. TIM Solutions in facts and figures

TIM Solutions was founded in 2007 with the vision of making business processes the driving force behind your company's success. Our software stands for state-of-the-art technology and groundbreaking innovation in the field of digital process automation. Our worldwide network of pioneers, visionaries and industry specialists is characterized by the constant exchange of knowledge and continuous development. Close research cooperations with numerous colleges and universities create a scientifically sound basis for product development.

Corporate values

Based on our corporate values of integrity, sustainability and professionalism, we continue to provide competent and personal support to our customers far into the future. We see project work as a valuable partnership and rely on trust-based cooperations. Sustainable business practices represent a decisive and trend-setting value for us in all our business matters.

The TIM team

Every member of our team is committed to ensuring our customers' success. Our extraordinary team spirit proves that trust-based work can form the basis for innovative and creative thinking. After all, it is not just the technical features a software offers that matter, but whether the software meets the needs of the people it was created for.

TIM

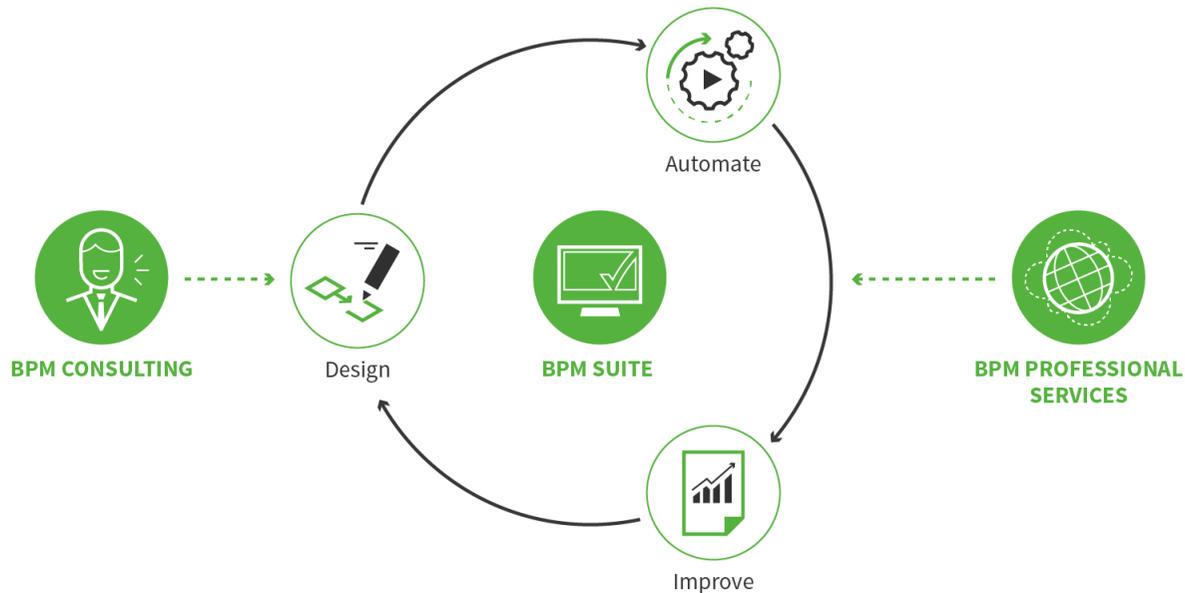

- ✓ Cost-effective start, ROI in less than 6 months
- ✓ Automation of all BPMN 2.0-based processes
- ✓ Fast development phase, easy implementation
- ✓ Executable as soon as modelling is complete
- ✓ Customizable process templates
- ✓ No IT know-how required thanks to no-code workflows
- ✓ Process automation allows you to focus on your goals
- ✓ Even complex processes are reliable and stable
- ✓ Real continuous improvement process (CIP)
- ✓ First-class support during every project phase
- ✓ High flexibility and maintainability
- ✓ Transparency across all processes and tasks

02. The TIM BPM Suite makes all the difference

Model, roll out, optimize! The TIM BPM Suite provides intuitive, step-by-step guidance, helping you create your digital process.

The TIM BPM Suite combines professional process modelling, intelligent workflow automation and in-depth process analysis to give you a unique overall solution. From intuitive form design and seamless integration of any number of interfaces to essential insights into how your processes are performing, our BPM software solution ensures you have the best possible support in every phase of the workflow lifecycle.

02. The TIM BPM Suite makes all the difference

#1 No-code philosophy

Thanks to TIM's no-code approach, employees can actively participate in the process using the intuitive web-based interface - no IT know-how required!

#2 BPMN 2.0 industry standard

TIM is the only automation solution worldwide that gives you unlimited freedom to use any BPMN 2.0 standard modelling tool to map your workflow.

#3 Your digital ROI

With TIM, you can count on a fast development phase and an uncomplicated roll-out, saving you time and money and helping you see a return on your investment (ROI) in less than 6 months.

#4 Customizable templates

Simply customize our process templates and get started! Our turnkey customized solutions combine our collective hands-on experience with the expertise of industry experts and universities.

02. The TIM BPM Suite makes all the difference

#5 Achieve your goal faster

As a true lightweight, TIM enables smart information logistics and quick adjustments. Benefit from a true continual improvement process (CIP) thanks to automated processes!

#6 Convenient connectors

Our connectors allow you to seamlessly integrate external data sources from existing IT systems into your workflows, making it even easier to connect any number of corporate applications.

#7 Intuitive user interface

The web-based interface ensures everyone involved in the process has easy access to tasks and processes, while process owners have a continuous overview of the current status.

#8 Excellent customer service

Our customers can attest to our outstanding support in every phase of a project. With an experienced team of experts, we actively support you during the implementation of your project.

03. Overview of different approaches and tools

You have come to realize that digital processes are the key to sustainable business growth, but are still struggling to choose a provider? It is true that the digitization market can seem a bit confusing at first glance. We hope the following diagram helps. In it, we show how different providers on the market use four basic approaches, ranging from "buy everything" (buy) and "program everything in-house" (make).

Before getting started, it is important to understand your own requirements and then to make clear decisions based on those requirements. Begin by answering the following questions:

- ✓ What is the budget for my digitization project?
- ✓ How independent do I want my departments to be when it comes to modifications?
- ✓ How important are transparency and intuitive use?
- ✓ How much IT know-how do the participants involved in the process have?
- ✓ How much support do I need during roll out?
- ✓ Which modeling software is being used internally?
- ✓ Etc.

03. Overview of different approaches and tools

The Tanker

- Heavy-duty IT system
- Expensive and difficult to customize and update
- Expensive to maintain
- Long project runtimes
- Many dependencies on internal IT or external consultants
- Examples: ERP systems, SAP, etc.

Lonely Island

- IT system that can only be used in one area
- Almost impossible to modify
- Only superficial modifications possible
- Expensive and difficult to customize and update
- No interfaces
- Example: HR systems

DIY Solution Kit

- ✓ From no-code to low-code
- ✓ Universally deployable
- ✓ WYSIWYG-Editor
- ✓ Many expansion options
- ✓ Easy to update
- ✓ Independent from IT
- ✓ Configurations make it easy to modify
- ✓ Example: TIM 

Spaghetticode

- Code only
- Universally deployable
- Considerable dependency on internal IT or external consultants
- Hard to maintain for the long-term
- Expansions often fail even before implementation

Make

03. Overview of different approaches and tools

In the hope of being able to solve all problems at once, many companies rely on "heavy-duty IT tankers" and forget about time and costs. Other companies act too short-sightedly for cost reasons and overzealously start programming themselves using internal resources. Standalone solutions that serve only one purpose seem to offer a way out, but leave little room for customization and expansion. For companies to remain independent, flexible and be able to define internal efforts themselves, while also benefiting from an intuitive application, it pays to rely on an innovative provider with a modular approach.

As a do-it-yourself module, TIM is suitable for companies of all sizes and any requirements. Prefabricated process templates can be tailored to meet your exact needs and integration into your own IT landscape is easy. In addition, the intuitive interface makes it easy for all employees to use.

When it comes to digital implementation, it is important to have a contact person at your side who can accompany and support you through every phase of your project and to the extent that you need. Our experts work with you to pave the way for a smooth implementation of your new software solution.

Please do not hesitate to contact us for further information.
