

Five typical business processes – one digital solution

Digital business processes are the key to sustainable company growth, yet many organizations drag their feet when it comes to digitalization projects, even though the first step is an easy one. Our overview shows five typical business process that are perfect for starting your digital transformation.

Onboarding process

Ease the legal burden on your HR department with a digital onboarding process and increase employee motivation from day one.

Achieve top results

The top five results of no-code / low-code process automation

- Time and cost savings
- Process and time budget compliance
- Transparency and traceability
- Minimal error rate
- Greater employee satisfaction

Policy management

Use digital policy management to ensure legal compliance with all regulations throughout your company, thereby easing the burden on your management.

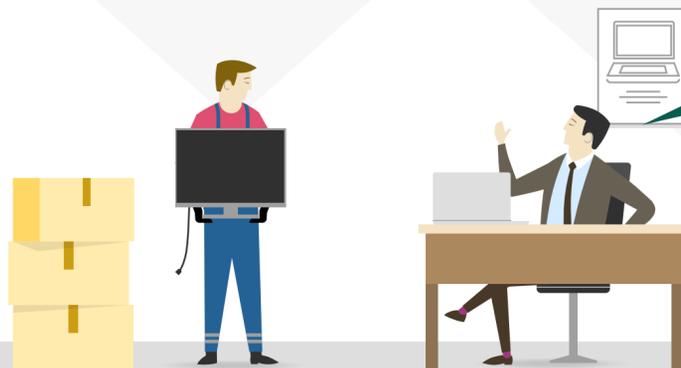

IT hardware request process

Digitize your IT hardware request process to minimize the administrative burden on your employees, avoid bottlenecks and benefit from reduced prices.

Product development process

Take advantage of digital product development and use the consistent transparency and time savings it offers to increase product quality and customer satisfaction.

Training request process

Give your colleagues the ability to submit and process workplace training requests in seconds and say goodbye to endless Excel lists.
